

# SUPERWHITES

*"The highest performing White Suffolks in Australia"*

## Mission:

- The Superwhites genetic improvement group was formed in 1995.
- Its members are White Suffolk breeders located across Australia committed to producing the highest performing White Suffolk rams in Australia.
- The group is focussed on continually adding value to the prime lamb industry through producing rams that perform much better than average.
- Collectively the group produces around 15% of all White Suffolk rams in Australia and is looking to increase that share.

## The Superwhites group has the following objectives:

1. Produce superior rams for the prime lamb industry.
2. Provision of accurate, across flock Australian Sheep Breeding Values for clients by collection of high quality data and using Lambplan.
3. To identify the best rams in Australia and use these within the group to improve the genetics of member flocks at a faster rate than other terminal sire flocks.

Rams are bred for high growth.  
After all, weight is what you get  
paid for!

Rams are selected  
for muscling in the  
loin and leg. They  
are the most  
expensive cuts.

Rams are bred  
from the best  
genetics in  
Australia and then  
performance  
tested to identify  
the best
